DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: 152. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
2. The drawings are objected to because in Figure 3, the line leading from reference number "110" does not extend fully to the "passage". A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Disclosure, Figures 6 and 7 labeled as prior art (Admission) in view of Anderson, US Patent 4,528,768.

Admission discloses the invention substantially as claimed with the exception of the locking member being pivotable with a cam head and a lever. Anderson teaches within the

Art Unit: 3644

analogous art of rod attachment the use of a locking member having a cam head and lever assembly for the secure attachment and quick release of rod members to each other. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the cam and lever system as taught by Anderson with the invention as disclosed by Admission for the quick release and secure attachment of the members, as these two structures were art-recognized equivalents at the time the invention was made (reference Gillming, Jr., US Patent 5,402,596 for an example of equivalent known rod attachment structure-44).

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Admission as modified as applied to claim 1 above, and further in view of Mortenson, US Patent 5,167,246.

Admission as modified discloses the invention substantially as claimed including a U-shaped part having two legs that are inserted in open ends of the transverse tubes. However, Admission as modified does not disclose the use of a positioning member mounted thereto and a bolt extending through the wall of the positioning member. Mortenson teaches within the analogous art of framed connecting members the use of a sleeve having a bolt extending there through (13) for the purpose of the secure fitting and quick adjustment of frame members. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the sleeve and bolt extension with the U-shaped legs of Admission for securely fitting the members together with the ability for quick adjustment.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cano-Rodriguez et al. (US 6,528,169), Chen (US 6,305,869), Gillming, Jr. (US
